

Axis Software Pte Ltd is a Singapore based company incorporated to provide quality software development and Systems Integration, solutions to organizations of various sizes.

Axis technical team has a wide range of experience from developing client-server applications to web-based software solutions for enterprise-wide applications. We combine the latest development tools with an ever changing technology, to provide a quality software service that meets the demand of industry trends.

Axis Engineers are based in Singapore so that support can be provided locally with just a phone call away and for our overseas client we are able to provide online support. The team also keeps itself updated with the latest technology in application software development.

Axis clients can attest to the capability of our team's knack to constantly satisfy their ever-changing demands in the competitive business environment of today.

Our Mission is "To Enable Organizations-Small, Medium & Large to face the Challenges of Today, by Improving Productivity, Increasing Efficiency, thus further enhancing their Customer Service Delivery, by exploiting the Technologies of Tomorrow"

We specialize in the following areas of services and skills expertise:

- ❖ **Systems Integration.**
- ❖ **Solution Architect**
- ❖ **Software Development Services.**
- ❖ **Microsoft Windows / SQL Server / Visual Basic.NET / ASP.NET**
- ❖ **Internet Applications.**

Our Domain Knowledge in the following areas has benefited many of our clients:

- ❖ **Retail Enterprises.**
- ❖ **Remittance and Forex Businesses.**
- ❖ **Hotels & F&B Sector.**
- ❖ **Automobile Workshop**

In addition to the above, we have developed custom software that is tailored to the specific needs of our clients with interfaces to their back-end Legacy systems.

Some of our Outstanding Software Products are ...

RetailSuite Retail Management Information Software for any type of retail Business.

AxRemiTT A Remittance Management Software is the Ultimate Solutions for your Remittance Enterprise.

AxMoney A Money Exchange Software builds to Suite the exact requirement of Money Changers.

AxDineInn A Restaurant Point of Sales Software can help any type of restaurant to run more efficiently.

Budget Inn A Comprehensive Hotel Management Software for Small and Medium size Hotels.

AxMoney is the Money Exchange Software build to suite the exact requirement of Money Changers. It is a revolutionary Money Exchange software product designed as a strategic business management tool for companies providing foreign currency financial services. This Software is the result of years of research and development in collaboration with accountants, Auditing Firms and currency exchange businesses as well as feedback from our valuable corporate clients.

Powerful - Easy to Use

AxMoney has been developed with user-comfort in mind. All modules are designed around a consistent user-interface. Therefore as you get familiar with one module, you have familiarized yourself with other modules as well. You can be up and running with only a couple of hours of training and take additional training only when needed.

Control - Your Operation

Advanced User Privilege Setup is one of many powerful features of AxMoney Software. Management can authorize or forbid employees from accessing and/or modifying specific forms and information. Administrators have granular control over detailed privileges of each employee. This feature greatly enhances the internal security of your business. An automatic log file records all activities carried out on the system, such as: nature of the transaction, date, time, and the name of the entity who conducted the activity.

Accounting - The Challenge

Whether you are a small currency exchange outlet or you run a wholesale operation and manage forward contracts, you need a system which can track your accounts, positions, inventory and other accounts in a centralized Database.

If you have been operating a foreign exchange business, you know that accounting is a very challenging and time consuming task. Most accounting packages on the market are not tailored to address the needs of foreign exchange businesses. AxMoney automatically takes care of the double-entry journal registry in the background.

Compliance

We have dedicated numerous resources to take into account all new international compliance measures. We Provide update facilities to the compliancy features (reporting, record keeping, queries, rating, cross referencing) of Block list as per the new legislation or guidelines require by regulating bodies. Software will provide the Transaction Detail as per the Local Government Requirement.

Rate Panel Integration

We provide optional integration of Rates Panel which gets data from our system for display.

Multiple Branch Support

AxMoney Supports Multiple Branches (via Internet) with Centralized Data.
